

The MTC is seeking an Environmental Consultant to serve businesses in Southwest and South Central Virginia.

This person is responsible for conducting on-site environmental services including assessments of the client's entire environmental footprint and impacts. The goal of the assessments is to provide the client with a confidential report detailing all problems and opportunities related to their waste streams, permitting, hazardous materials, etc.

This would most likely begin as a contracted 3rd party position, however, there may be the need for a full-time person in the future depending on grant funding.
